

FASTEN YOUR SEAT BELTS

The 787 Dreamliner and the exotic McLaren MP4-12C sports car have more in common than a sleek, aerodynamic look. Both make extensive use of lightweight carbon fiber composite technology. *Road & Track* magazine recently featured an interview on advanced composites and the Dreamliner with Boeing's Mike Sinnett, vice president and chief project engineer for the 787. As the two vehicles share "similar structural DNA," the auto magazine brought the McLaren to Boeing Field for a photo shoot with one of the 787 flight-test aircraft. The interview can be found at www.roadandtrack.com/special-report/5-questions-with-mike-sinnett.
